~ WHAT TRAIL ARE YOU LEAVING ~

There are two options where a person will end up when life is over. One road takes people to Heaven, while the other roads will end at the gates of hell. There will be no way to turn around and you won't be able to just stand outside. For this road is like an escalator does going up or going down. It will keep moving you to your final destination.

Today you are on a path that will eventually lead to somewhere. But it is not just you... it is everyone else, too. People are watching how you live when you say, "I am a Christian". Does your walk lead them to Heaven?

We take for granted and don't consider what we say, or do and how it affects others. People develop their opinions by what they see people doing.

Does your faith in God show a clear path for people to follow Christ Jesus? Are the things you are doing, the words you are saying, have a clear path pointing people to Heaven?

You can't make people go your way but you can influence them with your conduct, your speech, and your character, as a Christian. It does matter in the path people in your family, at work, your neighbors and even your enemies will consider taking that leads to one of those two places.

ASK THE MOTOR MEDICS®

Automotive Advice from the Under The Hood® Show

Dear Motor Medics,

I live in an area where we have winter road conditions and see many cars that end up either spun out or in the ditch and some that rear end others. The question I pose to you is about stopping and handling. Recently I started paying close attention to the types of vehicles that were involved in these incidents and I noticed that almost all of them were noticeably older than the ones that had not been involved in the mishaps. Is there a connection between age and lack of control or is it just a coincidence?

Thank you,
Dale in Des Moines Iowa

Dear Dale,

There's a connection between age and control. Many things contribute to how a vehicle stops. When tires are new the tread is deeper, so they shed water and cut through snow better and maintain a firmer grip on the road. A tire that is older with half its tread will have a much greater stopping distance. Also, suspension plays a big part. Most people don't replace shocks and struts unless they are bouncy but before you feel the extra bounce, they will start to lose their ability to keep the tires in contact with the road as they once did. Many newer vehicles also have elaborated electronic stability control systems. The best way to be sure your car is performing at its best ability is to consult with your mechanic about your vehicles condition on a regular basis.

Take care,
the Motor Medics

Dear Motor Medics,

My questions about wipers on both the front and rear of my vehicle. I have a 2004 Chrysler Town and Country and the front wipers have stopped working three years in a row now in mid-winter requiring replacing the wiper motor each time and the rear wiper never seems to wipe the glass completely. The blade has been replaced at least three times and it only works for a few weeks before it starts wiping poorly in the center.

Thank you,
Jack in Windom Minnesota

Dear Jack,

Because of the time the wiper motor is failing I suspect it may be due to the load of ice on the blades. Winter is brutal on wiper systems. It is extremely important that before you turn your wipers on you make sure that they are not stuck to the glass or bound by heavy snow. Clear the glass with a window scraper if necessary and lift the blades by hand to check them. If they are restrained in any way the motor will bear the load and may fail immediately. If you have a remote starter don't forget to turn off the wipers before you get out of the vehicle. Many people damage the system by forgetting them and when the vehicle starts so do the frozen wipers. As for the rear blade it may be the arm. The arm will lose tension as it ages and won't keep the blade in contact with the glass.

Take care,
the Motor Medics

Dear Motor Medics,

I want to get my wife a remote start for her 2010 Acura MDX but I need to do some research first. I have been told that adding anything to my car which has only 20k miles on it will void the warranty. I have never had a remote start, but it seems like almost everyone I know has one. It can't be that all of them have no warranty. Is there anything I should look out for when getting one as far as the kind of unit that will or won't work with my car?

Thank you,
Jake in Iowa

Dear Jake,

Adding aftermarket electronics won't void your warranty if the part you add to the car does not interfere with the operation of the car and the installation does not damage the car. When you have a remote car-starter installed make sure the shop that does it for you has trained installers who know your car. The shop should also have the technical support of a reputable company who stands behind the starters they sell. These things ensure that you will not have an issue with your warranty. On the other hand, we have seen many do it yourself installers create issues with the vehicles sensitive electronics that resulted in expensive dealership repair costs. When choosing a unit make sure you get one with the features you want such as the range you need; too short and you won't be happy.

Take care,
the Motor Medics

Dear Motor Medics,

My car needs new front and rear brake pads and rotors. They offered me three different pad choices and I was confused and haven't had the work done. I also want to know about rotors which seem expensive to replace. Why would I have to replace the rotors instead of machining them? My 2003 Honda currently has about 98,000 miles on it

Thank you,
Mary in Yuma Arizona

Dear Mary,

It's common to have several choices of brake pads available but to avoid confusion with my own customers I take the time to explain the difference between pads and note that pad X is the factory specified pad. When there is a choice it's usually a ceramic pad, a semi-metallic pad, and an organic pad. One will be what the factory specifies for the car while the other two can help cut noise and/or brake dust or save some cash. New rotors have really come down in price and many shops don't machine them any longer as they wear so fast that they are often too thin to machine or severely rusted from the elements which necessitates their replacement. If the rotors still have enough material and not too much run-out they can be machined but the cost may be close to what you will spend to replace them, and they will be thinner so the next replacement may come sooner. Don't forget cheaper is not better when it comes to brakes.

Take care,
the Motor Medics

CLASSIFIED QUICK TIPS

Prepare. Know what is important to readers shopping in your classified category.

Make Your Copy Complete.

Use ad copy effectively to thoroughly communicate to potential buyer(s). Organize the ad carefully. Space and punctuate, so that the reader can follow the ad and understand its content.

Be Creative Descriptive.

List major selling points (price, color, size, features or options).

Be Factual. Be Helpful.

Include hours of operation, best days and times in which to make contact as well as area code on phone numbers.

Make Your Ad Easily Recognizable.

Choose a main benefit of your merchandise and feature it in a headline. Use art, large type sizes, bolding and best of all, use white space to make your ad visually attractive and so powerful, it's jumping off the page.

Maximize The Amount Of Prospective Buyers/Readers.

Multiply insertions help prospective buyers/readers REMEMBER the ad because of repetition. Take advantage of discounted rates available for multiple insertions.

Urge The Reader To Act Now!

Every ad should include a strong bid for action. Stimulate prompt action by using such phrases as "Call Now", "Available Immediately" or "Won't Last".

The Big Nickel hopes these tips will help you, please call

417-624-4100

and our telephone sales representatives will be happy to assist you.
