*~ It Has Been And Still Is ~*

There has always been but one God that created the world and He is still the God of today and will be forever over all these years. God always watches the people whom He created. He sees some who have been faithful to Him while others have not been.

God created people to be sanctified according to His will. But He watches them with great suffering because they choose their ways over His ways and gave sin access to their heart and therefore have had to experience unnecessary pain.

God has had His heart grieved as those whom He gave His son's life for have turned away from being what He had created them to be, sentencing themselves to lives that fall short of accomplishing their purposes for their own existence.

God has had to turn His back, as so many have entered through the gates of hell to be separated from Him forever. All because they refused to believe and obey Him by following Jesus.

God has had to watch His people as they have tried to do so many things in the flesh when all the time He wants to help them, if they would just follow His ways.

God's word is proven and true whether the people choose to believe it or not. God's promises are real and sure if people will trust His power and let Him have charge to their situations.

God's power is unlimited and is more powerful than any other force on earth below or the heavens above. No matter what you think or what anyone else does, God is God.

# ASK THE MOTOR MEDICS®

Automotive Advice from the Under The Hood® Show

Dear Motor Medics,

I've got a noise under my hood that despite several attempts at repair persists. The vehicle is a 2004 Chevy Tahoe with the 5.3 engine and upon startup it will chirp from the engine drive belts for about 15 minutes no matter what the conditions. We have tried to repair this by switching the belt which resolved it for about a week. The next thing we tried was to replace the tensioner in hopes that the belt tension was incorrect. After the tensioner replacement, it lasted another week then was back to chirping again. Have you had this problem before and if so what kind of things have you done to stop the noise? My mechanic suggests trying a Gatorback belt. What is a Gatorback belt, and do you think it may help?

Thank you,  
Daryl in Sheldon Iowa.

Dear Daryl,

When we have belt squeaks, we look very closely at all of the rotating parts to make certain there is not a problem with alignment or wear that could be the root cause of the noise. We also check for proper tension and make sure the pulleys all have good bearings. With that all done we install a new belt and if it squeaks again soon after we sometimes use the Gatorback belt which is different in design in that it has grooves on both sides of the belt which can help to eliminate noise by providing a better gripping surface area.

Take care,  
the Motor Medics

Dear Motor Medics,

Every time fuel prices go up, I start to see products on the market that claim to increase fuel mileage. Some are claiming to increase up to 4 mpg! These products range from a pill you drop in the tank at fill-up to devices installed into the air cleaner and other crazy things. If these products are so good, why are the car manufactures not installing them at the factory instead of spending millions of dollars researching how to increase fuel mileage? And if there is a "pill" you can just drop in the tank to do the same then why don't the gas companies make a fuel that contains the pill contents in it already and market it as a fuel that gives you better mileage than the other guys?

Thank you,  
Trent in Decorah Iowa

Dear Trent,

While there are a few products that will help your car get a very limited increase in mileage, there are many more that are just a waste of your money. Before you buy be very diligent in your research of each product. You will find that many have not been proven to work and the ones that do may not be cost effective. You may spend more for the product than you will make up for with the limited mileage gain. As you said, if it were so good the manufacturers and fuel companies would use it to meet their goals and improve their sales.

Take care,  
the Motor Medics

Dear Motor Medics,

I will be ready to purchase a new car soon and will need to sell the one I have. I'd like to know how I can get the best resale value for my car and how to go about finding out how much that number should be.

Thank you,  
Darlene in McCook Nebraska

Dear Darlene,

When you want to get the best resale value at the time of sale you should start at the time of purchase. Along the way keep all records of anything done to the car to show the care you have given it. A well cared for vehicle will bring more than a neglected one. Follow the severe service maintenance recommendations in the owner's manual and when things break, have them fixed. If you have done none of these things or just a few you can still get good value for your car. A clean car will usually bring more money faster than a dirty one and often people buy on impulse because of looks alone. A complete professional detail is usually in the \$100 range. Once it's clean and ready to sell set your price. Selling it privately will usually bring the most money. To get a good estimate of what you should ask, check the local papers and car lots for similar mileage and condition vehicles. This will give you a real-world estimate for the location you are in as prices can vary between markets.

Take care,  
the Motor Medics

Dear Motor Medics,

How often should I replace the shocks and struts on my vehicles? Is there a time or mileage limit to follow and is that a rule or can they be checked? My current 5-year-old minivan has never had them replaced, has 110,000 miles, and I plan on keeping it another 3 years or so.

Thank you,  
Scott in Fort Morgan Colorado

Dear Scott,

Shocks and struts play a vital role in the ride comfort and safety of your vehicle keeping your tires in contact with the road and smoothing the ride. When they start to fail you may feel more bounce in the suspension or even feel the chassis bottom out over hard bumps. Usually before you feel the bounce braking distance and handling will be decreased. As they age the compressed gas/oil mixture that is used internally will begin to leak, first the gas which goes unseen and next the oil which can usually be detected leaking down the body of the units. Any sign of leakage or excessive bounce indicates that it is time for replacement. Mileage wise at about 50,000 miles or so they will start to lose performance. If you were to drive a vehicle with new units then drive yours, you would probably see a noticeable difference. This difference can mean shorter stopping times, better handling, and a smoother ride. For your vehicle with 110,000 miles and five years it is time for replacement.

Take care,  
the Motor Medics
