**~ Heading Toward the End ~**

It has now reached the time of the days just before the coming tribulation that is about to descend upon the world. The alignment of scripture with world events, especially here in America, should awaken those that have any biblical understanding about the last days and what is about to happen.

We are now witnessing the spiritual suicide of civilization. Ours is a broken and bleeding world because of the rampant expressions of sin and continual acceleration of the wickedness it causes. The born-again Christian population knows that the church is now soon to be removed as scripture says- in a moment, in a twinkling of an eye.

At that time, this world will never ever be the same place it once was. For when the Christian influence leaves, so does the Spirit's influence that was given to all to guide them. The Spirit as it is now will not be there with its instruction, power and peace. Much of the world will be at the mercy of a new authority.

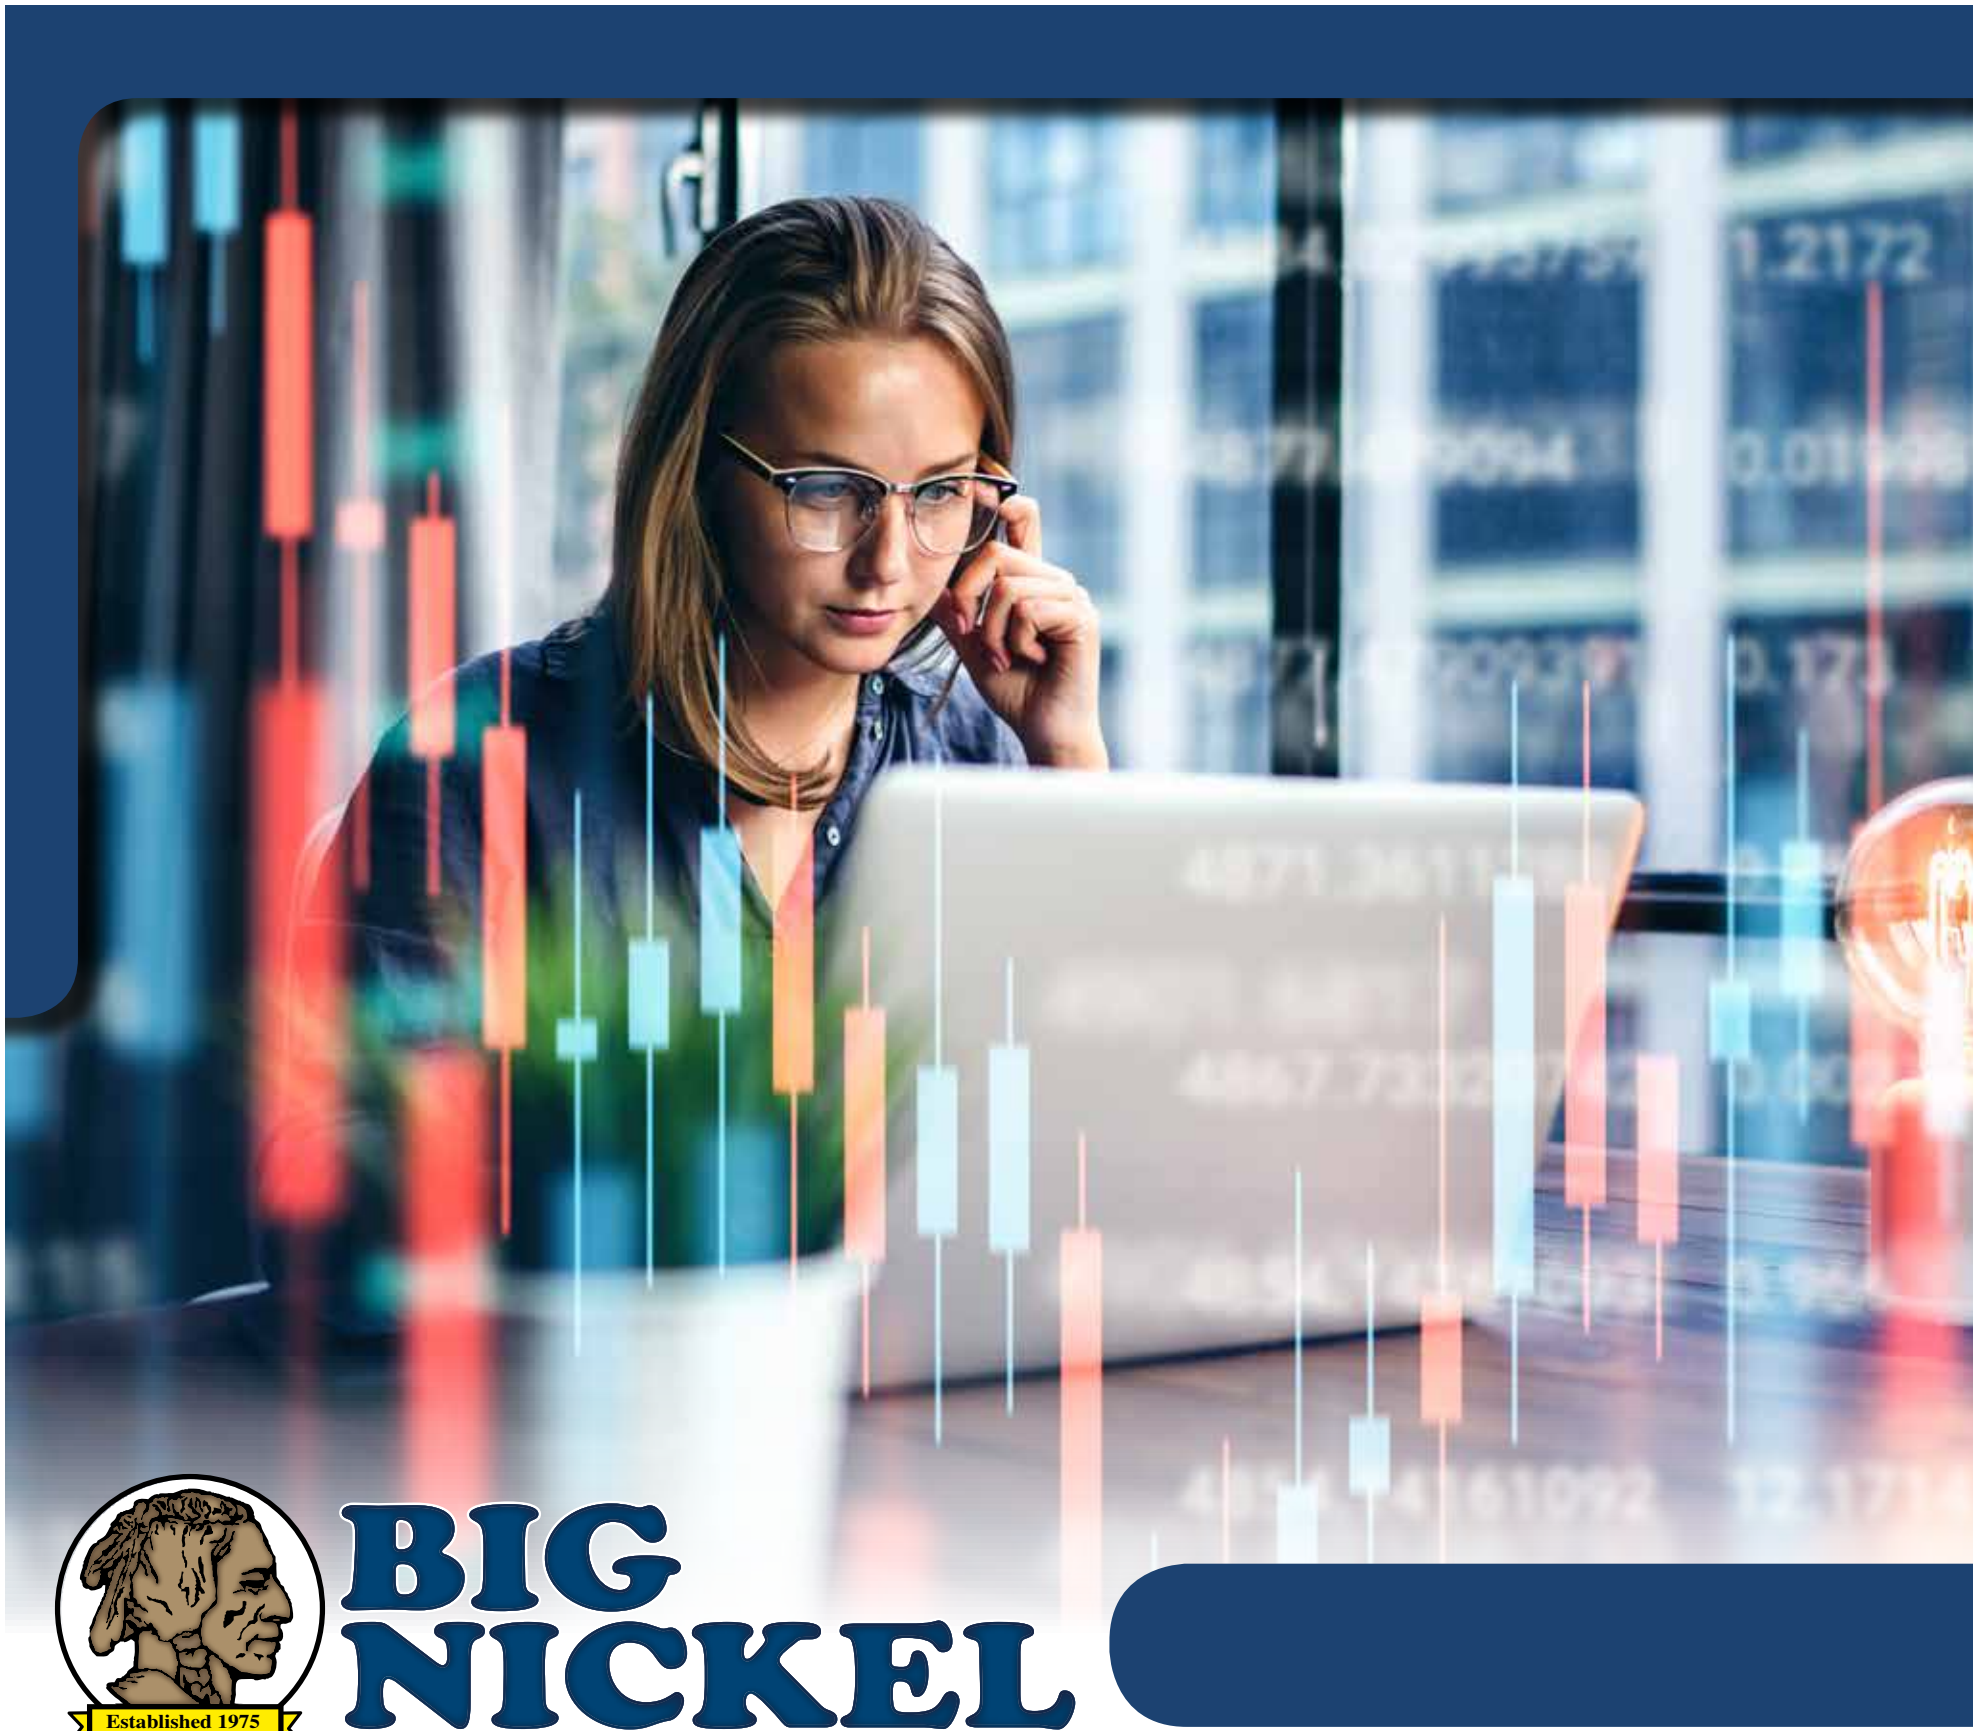

Christ Jesus is the only true hope from what this world will eventually face. Do you really know Him in the way you should? If so, what do you base that on?

# ASK THE MOTOR MEDICS<sup>®</sup>

Automotive Advice from the Under The Hood<sup>®</sup> Show

Dear Motor Medics,

I'm looking at several cars in the two year old range with around 10k miles and after deciding on all the features that I like about each one I think I have come down to two of them and they are both the same model but one has a 4 cylinder engine and the other a six. Both vehicles have automatic transmissions and have very similar features and I would like the best possible fuel mileage so I'm leaning heavily towards the 4cylinder but I'm not sure if that's the right choice. Do 4 cylinder model cars always get better mileage than a six cylinder?

Thank you,  
Scott in Larchwood Iowa

Dear Scott,

You are correct in not assuming that a 4 cylinder car always gets better fuel mileage because they don't. Often a 4 cylinder car is either too heavy to efficiently pull the load of the car and it lugs trying to move it which lowers the economy, or the car is geared lower than the six so that it can make up for lost power which also cuts down fuel mileage. We suggest that you look at consumer reports and look online for real world fuel mileage reports from folks who have driven the models you are looking at and compare before you buy. You may find the six cylinder is the better choice but not always. Researching any vehicle you buy is always imperative before making a car buying decision.

Take care,  
the Motor Medics

Dear Motor Medics,

My car recently suffered a lot of hail damage in a storm and I have been working with my insurance company to get the matter resolved. They want to replace things like the hood and trunk and a fender with a salvage yard part which matches correctly according to them and on the roof they want to do painless dent repair. My car is ten years old and has full coverage and with only 70k miles I want it fixed but I want all new parts and paint but they say they don't have to provide that, they say they just have to make it look like it did before the damage. Do salvage yard parts look as good as my old ones and can they really take out dents with no painting?

Thank you,  
Dan in Sioux City Iowa

Dear Dan,

That is really low miles for the age and we can understand your concern. If like kind and quality parts are needed for a repair a auto recycler is often the place the insurance companies will turn to as a source. These places carefully inspect their inventory and will help to supply them with the part that matches exactly and sometimes they don't even need paint if the finish is as good as the car they are going on and the color is a match. As for the paintless dent removal, it can be done carefully by a skilled paintless dent technician.

Take care,  
the Motor Medics

Dear Motor Medics,

I have a 2003 Dodge Grand Caravan and the air conditioning has failed. The vehicle also runs hotter than before. It seems like the fans come on when the gauge reaches almost into the red where before it only reached halfway. Both conditions occurred at the same time. Any help you can give would be much appreciated.

Thank you,  
Mike in Sandusky Ohio

Dear Mark,

Overheating issues with a Grand Caravan can be caused by multiple issues. You're supplying us with some details helps narrow down the cause. I can tell you that if the engine is running hotter than normal the computer can shut down the A/C to protect it. The A/C system needs to run at the proper temperature, or the compressor will be damaged and that is why this happens. This vehicle has a common issue with the fan relay which is a solid-state unit. When the unit fails you can lose both fans or just the low speed fan which I think may be the case in your situation. With this fan not running the A/C will overheat and be shut down and the high-speed fan will only run when the temp gets to the higher range needed to activate it. That is why the gauge would read higher than normal. Have a shop check the fans and the fan control circuit and repair necessary problems in the circuit; after that they can properly check the A/C.

Take care,  
the Motor Medics

Dear Motor Medics,

I really enjoy your radio show which I listen to via iTunes podcast. My wife drives a 2012 Chevrolet Tahoe 4WD with a 5.3-liter Vortec engine and 117k miles. The A/C tensioner pulley on the passenger side front bottom of the engine has been banging on the transmission cooler lines at the bottom of the radiator when the A/C was on and the engine under load. I thought maybe the bearings may be bad so I replaced the assembly but that didn't fix it. The belt is not very old, so I don't suspect that. I recharged the A/C system with refrigerant and the belt still pulls the A/C tensioner down into the transmission cooler lines when under load but only when the A/C is on. Any advice you can give me is greatly appreciated.

Thank you,  
Casey T in Huntsville Alabama

Dear Casey,

Start by checking the A/C compressor by using both high- and low-pressure gauges. I suspect you may find you have a blown A/C compressor head gasket which causes fluctuations in the low and high pressures resulting in changing loads making the tensioner act this way. I have seen this situation more than a dozen times in our shop. This is often caused by improper charging or a failed fan clutch which has caused A/C system overheating so check the fan clutch as well. When you charge the system adding refrigerant too fast can cause this as well so be careful.

Take care,  
the Motor Medics

### Fun By The Numbers

Like puzzles? Then you'll love sudoku. This mind-bending puzzle will have you hooked from the moment you square off, so sharpen your pencil and put your sudoku savvy to the test!

3			9			4		7
				8	2			9
						5		
8				4		6		5
		2			9			
5	6	3			7		2	
4		1						
		9						
						2		3

Level: Intermediate

**Here's How It Works:**  
Sudoku puzzles are formatted as a 9x9 grid, broken down into nine 3x3 boxes. To solve a sudoku, the numbers 1 through 9 must fill each row, column and box. Each number can appear only once in each row, column and box. You can figure out the order in which the numbers will appear by using the numeric clues already provided in the boxes. The more numbers you name, the easier it gets to solve the puzzle!
