~ Making the World a Better Place to Go to Hell ~

People in organizations, on committees, in politics, heads of companies, directors of corporations, leaders of movements, from inventors to environmentalists, are all trying to make the world a better place.

But has this brought down crime, seen less war, softened racial tensions, or given us a wonderful economy? Are less people suffering than they once did? Are families more intact? Has disease and sickness been stopped? Hundreds of groups in one form or another have put together movements to solve the world's problems. Yet each year there is more unease about what is happening to our world.

In trying to make the world into a better place to live, I'm concerned we've made it into a better place to end up in hell. We've removed our landmarks that once reminded us to never pass this way again.

And most of all, we dumbed down God, removed Him as much as we can, sometimes even in churches, and there lies the real issue that is plaguing our moral decline.

ASK THE MOTOR MEDICS®

Automotive Advice from the Under The Hood® Show

Dear Motor Medics,

I heard you guys on a recent show discussing vehicle warm-up times and heard you say it was not necessary to warm up a fuel injected vehicle. I thought that all vehicles should be warmed up to get the oil flowing at least a little bit. If this is so, how long is a good warm-up time?

Thank you,
Brandon in Dayton Ohio

Dear Brandon,

There was more to what we were talking about that you must have missed. While we said that the fuel injected vehicles manufactured in the past few years could be driven right away due to better parts and efficient injection systems we still recommend some warm up time. We have heard some people even say just start them up and drive them to warm them up faster although we don't agree with that. There has to be a proper medium between running a vehicle too long to warm it up which wastes fuel and taking off so soon that the defroster won't even keep a windshield clear posing a safety hazard. The owner's manual will provide a good reference for warm ups. For us personally we tend to err on the longer side of warm up times. We like to make sure everything is lubricated and working as it should. It also gives us a chance to do some important things like adjust those mirrors, fasten our seat belts, and most importantly, turn off our cell phones for safety.

Take care,
the Motor Medics

Dear Motor Medics,

My question is about accessories plugged into a lighter socket. Recently I have been experiencing dead batteries on my 2009 Cadillac Escalade and they tell me it's caused by the accessories that I leave plugged into the lighter at all times. If the vehicle is not driven every day it will not start and is completely dead. I question how something as small as a cell phone or GPS unit can drain a battery so quickly, is this possible? I have stopped leaving things plugged in and have had no further issues but wonder if it's not just a weak battery. What are your thoughts?

Thank you,
Darla in Elmira New Yor

Dear Darla,

It may sound strange but when anything is left plugged into the accessory outlet it can run the battery dead. Yes the power drain is very small and would take many days to drain a battery but there is something much larger at work here. Newer vehicles have many modules that when awake (turned on) will draw several amps of power and would drain a battery very quickly. To prevent this drain the modules go into a sleep state just like a home computer in sleep mode. They know when to sleep by monitoring the systems for non-use just like a home computer. If something is being charged by the lighter socket they think the system is still in use and keep the modules powered thus draining the battery quickly.

Take care,
the Motor Medics

Dear Motor Medics,

I've got a noise under my hood that despite several attempts at repair persists. The vehicle is a 2014 Chevy Tahoe with a 5.3 engine and upon startup it will chirp from the engine drive belts for about 15 minutes no matter what the conditions. We have tried to repair this by switching the belt which resolved it for about a week. The next thing we tried was to replace the tensioner in hopes that the belt tension was incorrect. After the tensioner replacement, it lasted another week then was back to chirping again. Have you had this problem before and if so what kind of things have you done to stop the noise? My mechanic suggests trying a Gatorback belt. What is a Gatorback belt, and do you think it may help?

Thank you,
Daryl in Sheldon Iowa

Dear Daryl,

When we have belt squeaks, we look very closely at all the rotating parts to make certain there is not a problem with alignment or wear that could be the root cause of the noise. We also check for proper tension and make sure the pulleys all have good bearings. With that all done we install a new belt and if it squeaks again soon after we sometimes use the Gatorback belt which is different in design in that it has grooves on both sides of the belt which can help to eliminate noise by providing a better gripping surface area.

Take care,
the Motor Medics

Dear Motor Medics,

Every time fuel prices go up, I start to see products on the market that claim to increase fuel mileage. Some are claiming to increase up to 4 mpg! These products range from a pill you drop in the tank at fill-up to devices installed into the air cleaner and other crazy things. If these products are so good, why are the car manufacturers not installing them at the factory instead of spending millions of dollars researching how to increase fuel mileage? And if there is a "pill" you can just drop in the tank to do the same then why don't the gas companies make a fuel that contains the pill contents in it already and market it as a fuel that gives you better mileage than the other guys?

Thank you,
Trent in Decorah Iowa

Dear Trent,

While there are a few products that will help your car get a very limited increase in mileage, there are many more that are just a waste of your money. Before you buy, be very diligent in your research of each product. You will find that many have not been proven to work and the ones that do may not be cost effective. You may spend more on the product than you will make up for with the limited mileage gain. As you said, if it were so good the manufacturers and fuel companies would use it to meet their goals and improve their sales.

Take care,
the Motor Medics

print advertising rates
that fit any budget!

CLASSIFIED QUICK TIPS

Prepare. Know what is important to readers shopping in your classified category.

Make Your Copy Complete.

Use ad copy effectively to thoroughly communicate to potential buyer(s). Organize the ad carefully. Space and punctuate, so that the reader can follow the ad and understand its content.

Be Creative Descriptive.

List major selling points (price, color, size, features or options).

Be Factual. Be Helpful.

Include hours of operation, best days and times in which to make contact as well as area code on phone numbers.

Make Your Ad Easily

Recognizable. Choose a main benefit of your merchandise and feature it in a headline.

Use art, large type sizes, bolding and best of all, use white space to make your ad visually attractive and so powerful, it's jumping off the page.

Maximize The Amount Of Prospective Buyers/Readers.

Multiply insertions help prospective buyers/readers REMEMBER the ad because of repetition. Take advantage of discounted rates available for multiple insertions.

Urge The Reader To Act Now!

Every ad should include a strong bid for action. Stimulate prompt action by using such phrases as "Call Now", "Available Immediately" or "Won't Last".

The Big Nickel hopes these tips will help you, please call 417-624-4100 and our telephone sales representatives will be happy to assist you.
